(57) Abstract :

Fishes of Sairayamann(SAIRAIYA DAM) under Bairiya Block of West Champaran District of Bihar had been found very tasty and delicious by the consumers and their more average life in absence of oxygen and water. A comparative study and experiments of the life period and survival of Fishes has revealed that energy level of such fishes is very high as they swim and jump in presence of incident rays of morning and evening rays. This is the cognitive form of Green energy transformation by dint of Blackberry and water. There may be a factor of Molality and molarity of solution of water as solvent in the form of different carbonic material and oxidant as the trees flowers, fruits and leafs also falls inside the dam and they affect the viscous properties of existing water. Water can consume more extent of sun rays and may be re generated in the form of energy in this specific case.
