(57) Abstract :
Round the clock the process of oxidation and reduction (REDOX) inside the human body is one of the important chemical processes which happened to be held inside the human bodies. Scalable heat of the body maps the human survival. It is not known that what is the minimum and maximum heat/energy level for human survival but in the school of nature, nature itself teach us for our survival. It is the known fact that when two materialistic substances come into the contact of one another and collide or move on one another surface heat level of both of the bodies changed. Probability of the formation of nodes and anti-nodes of heat transmission in the sole of human foot is possible. Early old age, whiteness of hairs, fatigue in human body and its parts may suppose as the disturbances in the chain heat reduction amplifier of the body. Those who move on the grass surface by necked foot in the morning and in the evening lacks to such problem .Some health experts also suggest for such walk without shoes or slippers, our innovation tending to some specific claims and terming frictional forces working between the grass field and sole of the foot of the pedestrians as Frictional friend.
