(57) Abstract :

It is the evident fact that India is one of the most natural disaster prone countries in the world. 68% of land in India is prone to drought. 60% of it is prone to earthquakes. 12.5% of the land is prone to flood viz: more than means 12.5 % of the total earth land remained covered for than three to four months by flood water in the different states of Indian Union. During micro level of investigation, it has been observed that this natural calamity tolls hundreds of lives in India where most of the death occurred due to non-availability of food during flood break. it has also been observed that food is the important factor that may save the lives of human being surrounded by the water lodging as the perimeter of an individual. Here, inventors have developed an innovative life jacket in the shape S to be known as S-Kit and this Kit may be live saving and food cooking tool during flood when a person be surrounded by the flood water and there be no scope for agency to provide food for the survival of life as this kit not only can protect a human being from the bite of snakes and other hazardous bees during the flood but a minimum doze of cooked food may be available to save the life of a person able to stand and move from one place to another place. The cap, the small cylinder, a small batter connected with the cap that bears a solar plate chargeable panel. This is a virgin product with a unique process of cooking system panel and if people of flood prone area be supplied such kit there may be possibility of saving lives of not only during flood break but may be used by our Indian arm forces during their duties in Glacier and other icy are of India.
